Introductory

Acknowledgment.

The complete revision and expansion of most of the lists throughout the present edition is exemplified in the very useful combining of the Complete Type Collection List with the oft published Synopsis of Dana's "System of Mineralogy." The different types and varieties thus follow each species heading with fuller descriptions of the form and physical characters of each than was practicable formerly. A feature which will especially commend itself to mineralogists, is the insertion in proper position in the systematic arrangement, of all recently discovered minerals. This includes the minerals described in the new "Second Appendix" to the "System," access to the manuscript being kindly given by Prof. Dana. The compiler is especially indebted to Dr. F. Ward for the selection of data from the Supplement and two Appendixes, and locating the new minerals; to Prof. Wm. E. Ford for advice concerning species of doubtful relationship; to Prof. Amos P. Brown for suggesting the presentation of the hardness by group; and finally to Prof. Edward S. Dana and Messrs. Wiley & Sons for permission to reproduce from the "System" the numerous figures which add so much to the value of the catalog.

Rare Minerals

In Commercial Lots for Manufacturers

Progress in metallurgy, lighting and other special industries in the past decade has been marked by a rapidly increasing use of the rare metals. One of the obstacles which the technologist faces is the limited and irregular supply of raw material. Our facilities for acquiring these ores are exceptional, as we employ traveling experts and are constantly receiving samples from correspondents throughout the world. The results of thirty-three years of wholesale collecting affords a choice of over two thousand different varieties of minerals, as listed in the Complete Type Collection, Part II. Specimen prices of several hundred useful minerals are given in Part V, Economic Mineralogy. The more important are mentioned in the Laboratory List, Part VIII, with prices by weight for samples. Correspondence is solicited with consumers or experimenters desiring ton lots.

Assurance of Quality

**We Pay Transportation To Any Address
In The World.**

SPECIFIC GUARANTEE. If you do not like the specimens return them at our expense. We take responsibility of loss or breakage in transit. The risk of double transportation we assume, gives assurance that your requirements will be met.

WE REFER TO curators and teachers of mineralogy in all countries.

PRICES ARE UNIFORM. The "one-price" system simplifies buying, and wins universal favor.

PAYMENTS. For convenience, we accept the following rate of exchange: \$1.00 = 4/- = M. 4. = Fcs. 5. = L. 5.

The "Traveling Exhibit."
An
Oak Mineral Chest

Is presented, if requested, with each purchase of Hand size or larger specimens, totaling \$20.00 or over. If chest is not requested,

we deduct instead 10 per cent.
from total price. These offers apply only when all specimens are kept.

PLATE I. OAK CHESTS NOS. 1 AND 2.

OUR DISTRIBUTION of specimens (transportation paid) takes two forms:—

FIRST.—Shipments to those who prefer to select from the specimens themselves. Our knowledge of the needs of the buyer are often indefinite and the selection we make may not always accord with his individual taste. The result is that some specimens may be returned at large expense to the seller and trouble to the buyer.

DISCRIMINATING BUYERS are requested to give us full advice as to their requirements, thus permitting us to choose specimens which may win entire approval.

SECOND.—Many are able to order from a catalog, and to such our material gives universal satisfaction. Those ordering in this direct way benefit by the chest offer, or equivalent 10 per cent. allowance, having always the right of prompt rejection.

THE CHESTS are iron-bound and made in the best and strongest manner, of $\frac{7}{8}$ in. (22 mm.) first quality oak, antique wax finish. There are three sizes:—

No. 1. Flat Mineral Chest. Measures inside $23\frac{1}{2} \times 17\frac{7}{8} \times 2\frac{3}{4}$ in. (60 x 45 x 7 cm.). Given with not less than \$20.00 worth of minerals. See upper chest in Plate I.

No. 2. Two-tray Mineral Chest, with handles. Measures inside $24\frac{5}{8} \times 19 \times 6\frac{3}{4}$ in. (63 x 48½ x 17 cm.). Given with not less than \$35.00 worth of minerals. See Plate II, also lower chest in Plate I.

No. 3. Four-tray Mineral Chest, with handles. Measures inside $24\frac{5}{8} \times 19 \times 12\frac{3}{4}$ in. (63 x 48½ x 32½ cm.). Given with not less than \$50.00 worth of minerals.

THE OAK TRAYS are of uniform size, measuring inside $23\frac{1}{2} \times 17\frac{7}{8} \times 2\frac{3}{4}$ in. (60 x 45 x 7 cm.). They are made of $\frac{1}{2}$ inch (13 mm.) solid oak, with hand-holes at ends, being more convenient to handle than drawers. Each oak tray is fitted with 25 white pasteboard trays measuring $4\frac{3}{4} \times 3\frac{9}{16}$ in. (12 x 9 cm.). Two of these 12 x 9 cm. pasteboard trays are interchangeable with one 18 x 12 cm. tray, or one is interchangeable with two 9 x 6 cm. trays. Thus each oak tray holds from 15 to 50 fine pasteboard trays. These are indispensable in keeping orderly arrangement.

THE COST (WHEN NOT GIVEN WITH SPECIMENS) delivered to any address is, for No. 1, \$4.00; No. 2, \$7.00; No. 3, \$12.00. If made singly by a good cabinet maker they would cost double these figures. Chest prices do not include pasteboard trays.

If a chest is not desired, then deduct 10 per cent. from your remittance (of \$20.00 or over.) This is the average per cent. saved us by avoiding return transportation and handling, when you retain the entire lot. *This allowance is only on hand size or larger specimens and only when no specimens are returned.*

Sample of Attached Label

On Hand Size Specimen in Pasteboard Tray

LABELING is one of the features of our business in which our clients rely upon the careful and conscientious work of the trained mineralogists in our employ. The name of the mineral, both species and varietal, and the composition in chemical formula, are essential on a reference specimen. The correct locality is of importance and is given especial attention. The reference number in Dana's "System of Mineralogy" is useful in arranging a collection.

The larger size of the universal loose label makes it more easily read and permits mention of the crystalline system. A great disadvantage is the frequent misplacement of the loose labels. Hence our use of the small attached label. *Every specimen leaving our establishment has pasted on the back one of these miniature labels. The museum size specimens are also accompanied by the large Exhibition Label when requested.*

PLATE VI. SAMPLE MUSEUM SIZE SPECIMEN ON BLOCK-MOUNT. (In practice the small label is attached to back of specimen.)

Museum Size Specimens

Averaging 12 x 9 cm. ($4\frac{3}{4}$ x $3\frac{1}{2}$ in.)

Weight averages about one kilogram ($2\frac{1}{2}$ lbs. avd.)

The illustration opposite shows the average size of specimens listed by us for private or public museums, for the school or college-class room, or for office or laboratory display, where large examples of showy appearance are desired. While intended for glass cases, as shown in Plate VII., they may be held in a drawer cabinet fitted with pasteboard trays, the drawer being 7 cm. ($2\frac{3}{4}$ in.) deep. In preparing collections in the museum size, especial attention is paid to the shapeliness of each specimen, and to the selection of bright colors and striking crystallizations, wherever this can be done without impairing the representative character of the collection.

Where specimens are desired for the lecture table or passing among the class, a generously proportioned specimen tells the various properties and characteristics of the mineral, much better than a smaller piece requiring longer study.

A PASTEBOARD TRAY ACCOMPANIES EACH SPECIMEN. See Plate III.

OUR IMPROVED PASTEBOARD BLOCK-MOUNT SUBSTITUTED FOR TRAY, if requested, with museum size specimens. See opposite page. It is made of extra heavy pasteboard, covered with fine white paper, glazed to resist dust. This neat and light paper block, affording a simple white background, displays the average specimen much more effectively than the old-fashioned and sombre wooden one. The depth of the mount is: Top, 9 cm. ($3\frac{1}{2}$ in.); base, 13 cm. (5 in.). The slanting front measures $4\frac{1}{4}$ cm. ($1\frac{5}{8}$ in.). The length is 16 cm. ($6\frac{1}{4}$ in.) and the height $2\frac{1}{4}$ cm. ($\frac{7}{8}$ in.). Price for extra blocks, express paid, \$8.00 per 100.

LABELING is illustrated in Plates IV., V. and VI.

PRICES for museum size are double the prices for hand size, following mineral names in this catalog.

PLATE VII. COLLECTION OF MUSEUM SIZE SPECIMENS WITH EXHIBITION LABELS.

49671

Hand Size Specimens

Averaging 10 x 7 cm. ($4 \times 2\frac{3}{4}$ in.)

Average weight about 450 grams (approximately 1 lb. avd.)

"Size is a secondary factor in the utility of a specimen, but it is one about which opinions vary greatly. What have you found to be *the most desirable size for mineral specimens, intended for use of students, and for practical purposes of reference?*"

In 1907 the above inquiry was addressed to teachers of mineralogy throughout the world. In nearly 100 replies received, the average or composite size preferred was 10 x 7 cm. ($4 \times 2\frac{3}{4}$ in.). Few preferred a smaller size and some preferred a size even larger. The result of our canvass of the opinion of experts led us to adopt this as our principal stock size, as illustrated in Plate V.

THE CHARACTERISTICS of the mineral and its associations are displayed far better in this size than is possible in a fragment. The representative character of the specimens in illustrating physical properties and crystallization, is considered of first importance, but incidentally many of the specimens are of attractive appearance.

PRICES given after mineral names in all collection lists, save the crystal lists, are for standard Hand Size Specimens averaging 10 x 7 cm. ($4 \times 2\frac{3}{4}$ in.).

A PASTEBOARD TRAY ACCOMPANIES EACH SPECIMEN. See Plates III and V.

LABELS are illustrated in Plates IV and V.

Small Size Specimens

Averaging 7 x 5 cm. ($2\frac{3}{4} \times 2$ in.)

Weight averages about 225 grams ($\frac{1}{2}$ lb. avd.)

If purchased in lots of less than 10 of one kind, the prices are the same as for the hand size specimens. When purchased for classes, in lots of 10 or more pieces of one kind, the cost per specimen is one-half the catalogued prices for hand size specimens. This includes delivery to any address, but does not include chests.

Drawer Cabinets

Prices include crating and transportation to any address. Made after our own designs, based on long experience in handling specimens, being like cases recently manufactured for our own equipment. The work of a conscientious cabinet maker is here combined with the practical knowledge of the mineralogist's requirements.

FINE SOLID MAHOGANY ($\frac{7}{8}$ in. or 12 mm.) is used for the drawer fronts and for all parts except the back of the case, sides, back and bottom of drawers, which are made of $\frac{5}{8}$ in. (16 mm.) cherry. Quartered oak, at the same cost, will be used if specified in order.

FINISH is in three coats of shellac, rubbed to a dull light natural finish. (Stained dark if specified in order).

SOLID BRASS KNOBS, firmly secured on inside.

THE DRAWERS measure inside $28\frac{1}{4}$ in. wide x $17\frac{7}{8}$ in. deep x $2\frac{3}{4}$ in. high (72 cm. wide x 46 cm. deep x 7 cm. high). Each drawer will hold (1) 30 hand size trays, or (2) 24 hand size and 12 small size trays, or (3) 12 museum size and 6 hand size trays. A groove is cut in the sides of the drawer, which slides smoothly on runners. Corners are hand-dove-tailed.

Size A. Eighteen drawers in two tiers. Measures, over all, 66 in. wide x $20\frac{1}{2}$ in. deep x 36 in. high (168 cm. wide x 52 cm. deep x 92 cm. high). Holds about 600 to 700 specimens, averaging $4 \times 2\frac{3}{4}$ in. (10 x 7 cm.). Price, \$72.00.

Size B. Ten drawers in one tier. Measures, over all, 35 in. wide x $20\frac{1}{2}$ in. deep x 38 in. high (85 cm. wide x 52 cm. deep x 89 cm. high). Holds about 350 to 400 specimens averaging $4 \times 2\frac{3}{4}$ in. (10 x 7 cm.). See Plate IX. Price, \$45.00.

Size C. Six drawers. Measures, over all, $34\frac{1}{2}$ in. wide x $20\frac{1}{2}$ in. deep x $24\frac{1}{2}$ in. high (88 cm. wide x 52 cm. deep x 61 cm. high). To hold Collections Nos. 14, 27, or III, about 200 specimens averaging $4 \times 2\frac{3}{4}$ in. (10 x 7 cm.). Price, \$30.00.

Prices do not include duty on cabinets or chests delivered in the few countries where Customs' duty is charged on same.

Note

Since the appearance of our former complete catalog, an improvement in the form of label used by us and increasing care devoted to the preparation of material, has resulted in a general raising of the already high standard for which our collections are noted. As in the past, our aim is always to select the most typical representatives of each mineral obtainable in the mines and quarries of the world.

A price is given opposite each specimen in the collection lists, the figure quoted being for the popular hand size. One who does not desire an entire set exactly as listed by us, may thus make, without correspondence, an immediate selection of any of the specimens comprising the collection, with a knowledge of the cost of each item. Selections may also be made from the Alphabetical Price List in Part III.

All but the smallest collections may be purchased in the catalogued parts or installments, without proportionately increasing the cost. This permits the gradual purchase of the more expensive collections, each part filling important gaps in the growing nucleus and not being merely a detached section. The "collection price" for each set is less than the sum of the individual values of the specimens comprising it. Our collections are prepared a number at a time, thus effecting a material saving in labor-cost.

All collections listed, except Nos. 1A, 1 and 3A, are ready for shipment immediately on receipt of order.

PLATE VIII. ELEMENTARY SCHOOL CRYSTAL SET IN CABINET. REDUCED TO $\frac{1}{2}$ DIAMETERS.

PART II

Advanced Systematic Collections

**Synopsis of
Dana's "System of Mineralogy"**

PLATE IX. TEN-DRAWER CABINET, HOLDING ABOUT 400 HAND
SIZE SPECIMENS.

Advanced Systematic Collections

These are arranged according to the generally accepted classification in Dana's "System of Mineralogy," or in the "Text-book of Mineralogy" by the same author. They can be rearranged to accord with other classifications, as the purchaser may desire. The specimens have attached, labels and numbers to correspond to numbered lists.

Despite our exceptional facilities for securing minerals through our travelers or numerous correspondents, and by the purchase of old collections replete with historic rarities, it requires several years to assemble a Complete Type Collection, such as is here catalogued. Hence we have always some of these advanced collections in course of preparation.

The descriptions in the list, made from collections in stock, are moderate in their indication of perfection, definiteness, luster and the characteristics which go to make up good crystallizations. No attempt is made to indicate the beauty or attractiveness of the specimens beyond the bare statement of form and color, etc. The average standard of crystallization and general excellence, in any collection delivered by us, will be as high as is here indicated.

It should be kept in mind that wide variation in types is encountered by all endeavoring to recognize the innumerable forms of the mineral kingdom. The student who has mastered a few hundred specimens is often warned that they represent but the commoner types, and in the field new and unknown varieties confuse and puzzle him at every turn.

Practice in the examination of widely varying types means a fuller acquaintance with minerals and increased power of observation. Advanced courses in mineralogy include constant drill in the identification of a large series of minerals by sight and by the quick tests applicable in the field. Prominent teachers who are regular and large buyers of minerals, credit their success largely to these practical methods.

Therefore as complete a collection as possible should be selected. The rarer specimens, even if not carefully studied, will prove invaluable for reference and comparison.

No. 1A. Complete Type Collection

Twenty-five hundred museum size specimens, averaging 12 x 9 cm. ($4\frac{3}{4}$ x $3\frac{1}{2}$ in.). Selected by us from the 2640 numbered and priced items in the list. •

Intended for individuals or institutions desiring a collection, which for study or comparison, is fairly complete in the light of present knowledge. Over six hundred distinct species are represented, embracing the most important in Dana's "System," including the Supplement and two Appendixes.

The principal known varieties and types of common and rare species, the crystal forms described in the Complete Crystal List and the features of the Complete Physical Series, together with the specimens comprising the large Economic, Chemical and Rock-forming series catalogued elsewhere, all find a place in this complete general collection, duplication always being avoided.

The multiplication of local examples is avoided, unless a variation of type is thereby gained. The occurrence of the commercial minerals is especially considered worthy of illustration by as many examples as their variations demand.

Our last published catalog included a list completed to 1500 specimens. In its present enlarged form, reaching over 2500 specimens, there are comparatively few public or private collections which excel it in point of comprehensiveness and general value for reference purposes.

No. 5A. University Collection

Six hundred museum size specimens, averaging 12 x 9 cm. ($4\frac{3}{4} \times 3\frac{1}{2}$ in.).

The University List, comprising the names marked with + or *, aims to include such minerals as are taken up in most university work. The 300 or more distinct species emphasized by heavy type in Dana's "Text Book of Mineralogy," are all represented. Some of them are quite rare, but are chemically important and essential in the illustration of a comprehensive and thorough course in pure mineralogy. Examples are shown of most of the economic minerals which the student or expert may wish to recognize, because of their commercial value. Numerous well known varieties which are found with the ores are also worthy of representation, although not in themselves valuable.

Individual museum size specimens of most kinds may be purchased at double the hand size prices given after each type. The sum of such individual values, in the museum size, exceeds \$1000.00. The "collection price," including delivery to any address, with trays and two 18-drawer cabinets, is \$900.00. Without cabinets, 10 per cent. less.

PURCHASE IN PARTS. Free delivery, with pasteboard trays and cabinets. Without cabinets, 10 per cent. less.

No. 5. Specialist's University Collection

Six hundred hand size specimens, averaging 10 x 7 cm. (4 x 2¾ in.). Same as the preceding, but smaller size.

Individual hand size specimens of most varieties are sold at the listed prices. These exceed \$500.00. The "collection price" for all the specimens is \$450.00, delivered to any address, with pasteboard trays and mahogany 18-drawer cabinet. Without cabinet, 10 per cent. less.

PURCHASE IN PARTS. Free delivery, with pasteboard trays and cabinet.

PART I. Three hundred and sixty specimens marked + (Specialist's College Collection No. 9), with trays and 18-drawer cabinet.....\$261.00

PART II. Two hundred and forty remaining specimens marked *, with trays, but without cabinet.....\$189.00

No. 9A. College Collection

Three hundred and sixty museum size specimens, averaging 12 x 9 cm. (4¾ x 3½ in.).

In the list which follows, the names marked + comprise the College Collection. No effort is spared in the work of abridgment, to make this as useful an advanced collection as the limited number of specimens will permit. The College List includes the most important minerals in Dana's "Text-book of Mineralogy," as well as all of the minerals contained in the Mining List and High School List. About two-thirds of the specimens are distinct species. As in the larger collections, every care is exercised that the College Collection may be thoroughly illustrative,

and serve as a useful adjunct to private study or class work. With its many pieces of striking form and beautiful color, it makes a most attractive exhibit in the lecture-hall or college museum.

Individual museum size specimens of most kinds may be purchased at double the hand size prices given after each name. The sum of such individual values, in the museum size, exceeds \$550.00. The "collection price," including delivery to any address, with trays and mahogany 18-drawer cabinet, is \$480.00. Without cabinet, 10 per cent. less.

Remarks on the Synopsis of "The System of Mineralogy"

Sixth Edition with Appendixes by Edward Salisbury Dana

In this synopsis are inserted in proper position, new species and distinct varieties or types mentioned in the "**Supplement**" and "**First Appendix**" to the "System" and likewise the new unpublished "**Second Appendix**" (1909), to the manuscript of which access was kindly given. These minerals are marked "S.," "I." or "II." in the Species No. column. Many of them, like some of the "related compounds" in the "System," are of doubtful position, owing to the incomplete knowledge concerning them.

THE FIRST SYNOPSIS of Dana's "*System of Mineralogy*," was published in the "*Naturalist's Agency Catalogue*," issued by Dr. A. E. Foote in 1876. The original "Table of Species," as it was called, gave in a condensed form, the physical and chemical characters of species, but did not mention varieties or subspecies. In its present form it is a combination of the last published "Synopsis," new matter from the Appendixes, and our "Complete Type Collection List."

THE NUMBERS OF THE COMPLETE TYPE COLLECTION LIST, 1 to 2640, are given in the first column.

COLLECTION LISTS are indicated in the second column by the following signs:—

Cross (+) indicates the commonest or most important minerals comprising the "College List" of 360 specimens.

Asterisk (*) indicates 240 additional common or important minerals, which with the preceding, comprise the "University List" of 600 specimens.

Circle (©) indicates 900 rarer or less important minerals, largely varieties, which with the preceding, comprise the "Varietal List" of 1500 specimens.

DANA'S SPECIES NUMBERS, 1 to 824, are given in the third column in heavy type.

THE SPECIES NAME of each mineral is given in heavy type.

THE CHEMICAL COMPOSITION is generally expressed by the dualistic formula, which in the case of complex compounds, often presents the chemical constitution more clearly than does the empirical formula.

THE SYSTEM OF CRYSTALLIZATION follows.

THE CRYSTAL FORMS are indicated in the commoner or the best defined cases with frequent references to the figures.

THE STRUCTURE is mentioned where of importance.

THE COLOR is generally referred to under each species.

HARDNESS is broadly indicated under each group heading by giving the range from the softest to the hardest species.

VARIETAL NAMES, in ordinary type, are indented.

SUBSPECIES or "related compounds," also in ordinary type, are in alignment with the species names.

ALTERATIONS (pseudomorphs) are given only in the commoner types.

CRYSTAL FORMS are indicated by the letters used by Dana. Miller's symbols are shown in the Complete Crystal List. The figures, reproduced from the "System," are idealized to show the form clearly. In the majority of cases the actual crystals do not equal the figures in the matter of completeness nor symmetry; moreover the actual specimens generally consist of crystals on the matrix or grouped, unless marked "loose."

SIZE OF CRYSTALS is given in approximate terms, as follows: "Microscopic," usually under 1 mm. (about $\frac{1}{25}$ in.); "minute," usually under 3 mm. (about $\frac{1}{8}$ in.); "small," usually under 1 cm. (about $\frac{2}{5}$ in.); "large," usually over 3 cm. (about $1\frac{3}{16}$ in.); "very large," usually over 9 cm. (about $3\frac{1}{2}$ in.).

SIZE OF SPECIMENS listed at \$0.20 to \$2.50 each, is generally hand size, averaging 10 x 7 cm. (4 x $2\frac{3}{4}$ in.). Those priced higher are mostly of this size, but in very many instances they are smaller and even insignificant. They are, however, always of typical character.

NAMES OMITTED in this synopsis, but mentioned in Dana's "System," "Supplement" and two "Appendixes," are (1). Names rejected by Dana. (2). Names given to supposed minerals which have later proved to be rocks, mixtures or highly impure substances. (3). Some obscure varietal names not prominently mentioned by Dana. Generally these have only local significance. (4). Many names of unimportant compounds of such doubtful character, that their rank even as varieties, is questioned. (5). The less frequently used synonyms.

RELATIVE RARITY of good typical specimens of each kind, is indicated by the price following the description. Items not priced, are, as a class, rarely obtainable, although there are individual exceptions to the rule.

INDEX. The position of any mineral in the Synopsis, may be found by referring to the Index and Price-List in Part III.

Single Specimens

From the following list, comprising all the priced items, we have on hand (outside of prepared collections), most of those marked with +, * or °, and can fill orders for individual specimens.

Of the priced items not so marked, many are not on hand in duplicate. They are generally quite rare and sometimes are historical rarities no longer found. Much of this "floating stock," comes to us in one or two specimens at a time, through the purchase of old collections. They are often immediately reserved for our large advanced collections, in course of preparation, or they are sent to clients who place advance orders.

YOUR DESIDERATA LIST should be filed with us if you want rare minerals. From time to time, we will submit for your inspection, specimens which may "fill in the gaps."

2. Silicates

A. Anhydrous Silicates

The classification here adopted for the anhydrous silicates cannot be carried through strictly, since there are many species which do not conform to any one of the groups named, and often the true interpretation of the composition is doubtful. Furthermore, within a single group there may be a wide variation in the proportion of the acidic element.

2. Pyroxene Group. RSiO_3 .

The orthorhombic, monoclinic and triclinic species of this group are closely related in optical and physical properties and in angles. All have a fundamental squarish prism with an angle of 93° and 87° , with cleavage parallel to this prism. The metasilicates of Ca, Mg and Fe^{III} are prominent.

These species are closely related to a parallel chemical series formed by the corresponding orthorhombic, monoclinic and triclinic members of the Amphibole Group. In several cases the same chemical compound appears in both groups.

The chief external distinctions between pyroxene and amphibole proper are: prismatic angle of pyroxene 87° and 93° ; amphibole 56° and 124° , with more perfect prismatic cleavage. Pyroxene prisms usually short and often complex, massive forms mostly lamellar or granular. Amphibole prisms generally long and simple, columnar and fibrous types predominating.

2013. Clinoclone

3. Chlorite Group

Monoclinic. Hardness 2.5 (Prochlorite 1—2)

Ferrous iron gives to most of these species a green color. They are closely related to the micas in their monoclinic form, basal cleavage and optical characters, but their laminæ are comparatively inelastic. The Chlorites are essentially silicates of aluminium with ferrous iron and magnesium, and chemically combined water, manganese rarely replacing the ferrous iron. Tschermak calls those members of the group which occur in distinct crystals or plates, Orthochlorites; and the fine scaly or indistinctly fibrous forms, Leptochlorites.

ABBREVIATIONS. The species numbers preceding the names are those in Dana's "System of Mineralogy," 6th Ed. Where "r" or "n" follows the name of a mineral, it is *related* to or *near* the species, the number of which precedes the indexed name; when followed by "s," it is a *synonym*; followed by "s. v.," "s. n." or "s. r." it is a synonym of a variety of the species, or a synonym of a mineral near or related to it; if followed by "ap." it will be found in the first *appendix* following the species number given. "H" designates *Hydrocarbons*, described at the end of the "System."

APPROXIMATE PRICES are quoted on good typical specimens of minerals ordinarily in stock. A range of price indicates different types or varieties. Hence selections are best made from the preceding systematic list, giving composition, crystallization, structure and color, with separate price for each type.

PART IV

Elementary Systematic Collections

The arrangement, apart from the silicates, is according to the metallic constituents. Adapted for a short course in any popular book for beginners.

No. 14A. Normal or High School Collection

One hundred and eighty museum size specimens, averaging 12 x 9 cm. ($4\frac{3}{4}$ x $3\frac{1}{2}$ in.). Prepared especially to meet the demand among Normal and High Schools and private Academies for a practical reference collection, embracing only the common or most important species and varieties. The striking colors and choice crystallizations, in which the collection abounds, make it an attractive and essential feature in the class-room or school museum. The list includes every name in the summary of species as given in Prof. E. S. Dana's "Minerals and How to Study Them."

Individual museum specimens may be purchased at double the (hand size) prices given after each name in the High School List. The sum of such individual values in the museum size is \$228.10. The "collection price" for all the specimens is \$180.00, delivered to any address. This price includes pasteboard trays (or blocks if requested) and three No. 3 Oak Chests, as shown in Plate IX. Without chests, 10 per cent. less. Mahogany 10-drawer cabinet \$45.00. See Plate.

PURCHASE IN PARTS. Free delivery with trays and No. 3 chest. Without chest, 10 per cent. less.

PART I. (School Collection No. 21A) 60 names marked with +, totaling \$58.40 \$50.00

PART II. 60 names marked with *, totaling \$67.80 .. 50.00

PART III. 60 remaining names, totaling \$101.90 80.00

No. 14. Student's Normal or High School Collection

One hundred and eighty hand size specimens averaging 10 x 7 cm. (4 x $2\frac{3}{4}$ in.). Like the preceding, but smaller size. Individual specimens sold at listed prices. These total \$114.05. The "collection price" for all the specimens is \$90.00, delivered to any address with pasteboard trays and three No. 2 Oak Chests, as shown in Plate X. Without chests, 10 per cent. less. Mahogany 6-drawer cabinet, \$30.00.

PURCHASE IN PARTS. Free delivery with trays and No. 2 chest. Without chest, 10 per cent. less.

No. 18A. Secondary School Collection

One hundred and twenty museum size specimens, averaging 12 x 9 cm. ($4\frac{3}{4}$ x $3\frac{1}{2}$ in.).

An abridgment of No. 14A. arranged for schools desiring to cut down the specimens to the minimum number required in a brief course. Except in point of numbers, it presents the same attractive and showy appearance as the foregoing, and forms an excellent nucleus about which may be conveniently gathered other important minerals. The Secondary School List is exactly as recommended by Prof. E. S. Dana, and comprises the names marked with + or * in the following High School List.

Individual museum specimens may be purchased at double the prices listed (for the hand size). The sum of such individual values in the museum size is \$126.20. The "collection price" for all the specimens is \$100.00, delivered to any address. This price includes pasteboard trays (or blocks if requested), and two No. 3 Oak Chests, as shown in Plate X. Without chests, 10 per cent. less.

PURCHASE IN PARTS. Free delivery with trays and No. 3 Chest. Without chest, 10 per cent. less.

No. 18. Student's Secondary School Collection

One hundred and twenty hand size specimens, averaging 10 x 7 cm. (4 x $2\frac{3}{4}$ in.). Like the preceding, but smaller. Individual specimens sold at listed prices. These total \$63.10. The "collection price" for all the specimens is \$50.00, delivered to any address. This includes pasteboard trays with one No. 3 Oak Chest, as shown in Plate X. Without chest, 10 per cent. less.

PART II. 60 names marked with *, totaling \$33.90 .. 25.00

No. 21A. School Collection

Sixty museum size specimens, averaging 12 x 9 cm. ($4\frac{3}{4}$ x $3\frac{1}{2}$ in.). This limited selection is not intended for serious study, but more to interest beginners by the beauty of form and color of the specimens and the utility of a few of the popularly known kinds. Excellent for illustrating nature-study talks and elementary work generally. It will also serve as the smallest practicable nucleus essential in beginning a more extensive collection, these first specimens being always worthy of a place beside the later and rarer additions. According to the following "School List," comprising the minerals marked +.

Individual museum specimens may be purchased at double the listed prices (for the hand size). The sum of such individual values in the museum size is \$58.40. The "collection price" for all the specimens, delivered to any address, is \$50.00. This price includes pasteboard trays (or blocks if requested) and one No. 3 Oak Chest, shown in Plate X. Without chest, 10 per cent. less.

No. 21. Student's School Collection

Sixty hand size specimens averaging 10 x 7 cm. (4 x $2\frac{3}{4}$ in.). Like the preceding, but smaller. Individual specimens sold at listed prices. These total \$29.20. The "collection price" for all the specimens is \$25.00, delivered to any address. This includes pasteboard trays and one No. 2 Oak Chest, shown in Plate XI. Without chest, 10 per cent. less.

Economic Mineralogy

Mining Sets of Industrial Minerals and Ores

Economic Mineralogy

Mining Sets of Industrial Minerals and Ores

No. 24A. School of Mines Collection

Four hundred museum size specimens, averaging 12 x 9 cm. ($4\frac{3}{4}$ x $3\frac{1}{2}$ in.). Designed to illustrate as fully as possible the occurrence of the useful minerals. The more striking differences of form are included, as well as important variations in quality of ore, structure, color and mode of occurrence.

The School of Mines List, on the following pages, includes all the common economic minerals, while a few which are rarer and of less immediate commercial interest, are added because valuable if found in marketable quantity.

The commoner species are shown in much wider variety than is possible in shorter collections. Additional varieties and types of the commoner and more important species, will be found in the list of the Complete Type Collection in Part II. The School of Mines Collection will serve every purpose of a high grade reference or working collection for the mining man or prospector, or for the use of mining schools or other institutions offering advanced courses in economic mineralogy. Apart from its utility, it makes an attractive and imposing display, when properly cased, whether in the mining office or public museum.

Individual museum specimens may be purchased at double the hand size prices in the School of Mines List. The sum of these individual values in the museum size is \$1009.20. The "collection price" for all the specimens is \$800.00, delivered to any address. This includes pasteboard trays (or blocks if requested) and two mahogany 10-drawer cabinets. Without cabinets, 10 per cent. less.

PURCHASE IN PARTS. Free delivery, with trays (or blocks if requested) and one 10-drawer cabinet with each part. Without cabinets, 10 per cent. less.

PART I. 200 specimens in Mining List (Mining Collection No. 27A), totaling \$404.60 \$340.00

PART II. 200 remaining specimens, totaling \$604.60 460.00

No. 24. Expert's or Prospector's School of Mines Collection

Four hundred hand size specimens, averaging 10 x 7 cm. (4 x 2¾ in.). Same as preceding, but smaller size. Individual hand specimens may be purchased at the prices in the School of Mines List. These total \$504.60. The "collection price" is \$400.00, delivered to any address. This includes trays and mahogany 10-drawer cabinet. Without cabinet, 10 per cent. less.

PURCHASE IN SECTIONS. Listed as collections Nos. 51 to 65.

No. 27A. Mining Collection

Two hundred museum size specimens, averaging 12 x 9 cm. (4¾ x 3½ in.). The demand for a reasonably complete series of economic minerals is met by this well arranged collection. As will be seen in the following "Mining List," which is one of the most popular we publish, no attempt is made to represent two varieties of the same mineral, except with very important species. It contains a large proportion of valuable ores, including practically all of those mentioned in the principal mining hand-books. For the work of the prospector or practical man seeking acquaintance with the actual ores themselves, this collection meets every requirement possible within the

limitations of two hundred specimens. Furthermore it makes a very satisfactory showing in the office, laboratory, classroom or public museum.

Individual museum size specimens may be purchased at double the hand size prices given in the Mining List. The sum of such individual values in the museum size is \$404.60. The "collection price" for all the specimens is \$340.00, delivered to any address. This price includes pasteboard trays (or blocks if requested) and 10-drawer cabinet, or four No. 3 oak chests. Without cabinet or chests, 10 per cent. less.

PURCHASE IN SECTIONS. Listed as collections Nos. 52A, 54A, 56A, 58A, 60A, 62A, 64A, and 66A.

No. 27. Expert's or Prospector's Mining Collection

Two hundred hand size specimens, averaging 10 x 7 cm. (4 x 2¾ in.). Same as preceding but smaller size. Individual specimens, totaling \$202.30 sold as listed. The "collection price" for all the specimens, with pasteboard trays and 6-drawer cabinet or two No. 3 oak chests, is \$170.00. Without cabinet or chests, 10 per cent. less.

PURCHASE IN SECTIONS. Listed as collections Nos. 52, 54, 56, 58, 60, 62, 64 and 66.

Sectional Series

of the School of Mines and Mining Lists

The following collections form successive sections of Nos. 24A, 24, 27A and 27. When sections valued at \$20.00 or over are purchased they are accompanied by the chests mentioned. Without the chests they are 10 per cent. less. If a sufficient number of sections are purchased to fill a drawer cabinet, the latter will be delivered, if requested, instead of chests.

Any fifty-specimen section of the School of Mines List may be purchased in separate parts as shown under Nos. 51A and 51, by first getting a twenty-five specimen section and later completing it by paying the difference between the collection prices of the twenty-five and fifty-specimen sections.

Prices include delivery to any address.

Advanced Collections

In the five years since the first publication of the Complete Crystal List, our advanced collections of crystals have met with a wider acceptance than was anticipated. A number of prominent teachers of crystallography, well known as writers on the subject, after examining in detail the Complete Crystal Collection, expressed surprise at finding such a unique and excellent series on sale.

While reduced in price, the advanced collections are superior to those originally distributed by us, both in the planning of the list and in the quality of material furnished. The arrangement and definitions in Dana's "Text-book of Mineralogy" have been carefully followed, making the sets especially valuable to those using this work or Penfield's "Determinative Mineralogy," most of the crystal forms described therein being included in the collection. An arrangement according to any other author, will, on request, be prepared without extra cost. The aim has been to accurately represent as large a number of forms as possible. A duplication of any combination has been avoided, even though occurring in different minerals. Variety of form is the primary object, while as many species and crystal groups have been introduced as was practicable. Out of thirty-two possible groups in the six systems, only twenty-three are known in nature. Of these, every one is represented. In revising the list, the Miller symbols have been added.

The individual crystals selected are the best our extensive facilities afford, and have been measured where necessary. They range generally from 1 to 4 cm. in length, and nearly all are sufficiently sharp and bright for the reflecting goniometer. The majority are large enough for contact measurement.

The mahogany cabinets holding the crystals are made according to our own designs, especially for these collections. The

4 x 3 cm. white glazed pasteboard trays display the crystals in an excellent manner. The crystals in each collection are numbered to correspond to the following list, besides having on each tray one of our small printed labels, giving name, composition and locality, as shown in Plate IV.

No. 73A. Complete Crystal Collection

Three hundred measurable crystals. As described above and in the Complete Crystal list, this set evenly covers the whole field of crystallography. Many of these collections have been sold at the former price of \$150.00. The total value of the crystals is \$153.85, and the present "collection price," delivered to any address, with trays in cabinet, is \$120.00.

Without cabinet, 10 per cent. less.

No. 75A. Abridged Crystal Collection

One hundred and fifty measurable crystals, marked *, comprising the Abridged Crystal List. A careful elimination of rare and less important forms is here effected. With trays, in mahogany cabinet similar to that in Plate VIII. The total value of the crystals is \$63.75 and the "collection price," delivered to any address, is \$50.00. Without cabinet, 10 per cent. less.

Price List of Loose Crystals

As the same form or combination may sometimes be found in many species, the collection which does not duplicate forms, necessarily omits some important minerals. The following can generally be furnished as individual crystals when desired.

The Roman numeral before each name indicates the system of crystallization: I. Isometric; II. Tetragonal; III. Hexagonal or Rhombohedral; IV. Orthorhombic; V. Monoclinic; VI. Triclinic.

The number or numbers after the names, indicate their position in the preceding Descriptive List of the Complete Crystal Collection.

Elementary

No. 77A. School Crystal Set

The crystals selected for this set, while essentially the same as those in the advanced collections, are generally over 1 cm. in length, many reaching 3 or 4 cm. Being intended for elementary work, they are sufficiently sharp for contact measurement, while many are bright enough for the reflecting goniometer. As far as practicable, the commoner forms and habits, of symmetrical and model-like aspect, have been used in planning the list and selecting the actual specimens.

On the back of the 3 x 4 cm. tray accompanying each crystal, is pasted our miniature label giving name, composition and locality. The light and neat mahogany cabinet holding the collection, is shown in Plate VIII.

Single crystals are sold at the prices in the School Crystal List. They total \$18.35. The "collection price" for the fifty crystals, with trays, in mahogany cabinet, delivered to any address, is \$15.00. Without cabinet, 10 per cent. less.

No. 80. Lecture Table Crystals

Twenty-five crystals, about 10 x 7 cm. (4 x 2¾ in.).

The number of these is limited by nature's supply, as few minerals occur in crystals large enough to be recognized across a room, or even when passed from hand to hand among the class. We have, however, arranged this incomplete series, embracing merely representative examples of the simpler forms. Some are a little rough in outline, but all are sufficiently well defined to illustrate the form, and are eminently adapted to this purpose. A number of these minerals are rarely found in such very large crystals, hence the total of the individual values exceeds \$45.00. The "collection price," delivered to any address, in trays and No. 1 chest, is \$40.00. Without chest 10 per cent. less. List sent on application.

Physical Mineralogy

**Series Illustrating Hardness, Structure, Specific Gravity,
Color, Effect of Radium, etc.**

With the exception of crystals, there are no collections prepared by us upon which are bestowed a greater amount of expert labor than in the selection of just the right specimens to illustrate the various physical characters of minerals. Thus, in the hardness sets, crystals or cleavages are selected; under structure, color and luster, a particular specimen from among many of its kind is carefully chosen with a view to exactly illustrating the required characteristic; the specimens selected for specific gravity tests are as pure and compact as they are found in nature, thus approximating the theoretical ratio; the cleavage series has been extended and illustrations of parting added. In general the definitions of Dana have been followed.

It should be borne in mind that the mere names of minerals opposite the different terms, do not indicate the nicety of variation shown by the individual specimens chosen. The same species often well represents different characters. As far as practicable, however, the duplication of species has been avoided.

The entire physical series, and notably the color section, makes one of our most showy and attractive collections.

FREE TRANSPORTATION to any address.

PRICES include pasteboard trays, or blocks with museum specimens if requested; also oak chests (or without chests 10 per cent. less), where minerals total \$20.00.

The following are according to the Complete Physical Series List.

Chemical Mineralogy

Collections of Specimens for Analysis

Laboratory List

of Minerals sold by Weight

Chemical Mineralogy

Specimens for Blowpipe and Wet Analysis

The material selected for these collections is as near chemically pure as the minerals usually occur in nature. All are clean, typical examples of distinct species. The list embraces those commonly covered in an elementary course, and includes most of the minerals recommended by Penfield, Dana, Toula, Plattner and other writers.

If a more extended collection is desired, it may be selected from the alphabetical Price List in Part III. or the School of Mines List in Part V. If the price there given is in any instance for impure material, a smaller but pure specimen will be supplied, provided the order mentions "for analysis." If instead of trimmed specimens, a more extensive set of pure lumps and fragments is preferred, they may be purchased by weight from the Laboratory List, pages 311 to 319.

No. 119A. Series for Chemical Analysis

One hundred museum size specimens of pure minerals, averaging 12 x 9 cm. ($4\frac{3}{4}$ x $3\frac{1}{2}$ in.). The average weight is about 1000 grams (2.2 pounds avd.), generally affording sufficient of each kind for 400 to 500 analyses. Individual museum specimens may be purchased at double the listed hand size prices. The sum of such individual values in the museum size is \$129.20. The "collection price" for all the specimens is \$100.00, delivered to any address. This price includes paste-board trays, or blocks if requested, and two No. 3 Oak Chests. Without chests, 10 per cent. less. If preferred, an equal weight of fragments in boxes, instead of trays or blocks, is sold in chests at \$100.00.

PURCHASE IN PARTS. Free delivery with trays and No. 3 Chest. Without chest, 10 per cent. less.

PART I. 50 names marked with *, totaling \$59.70 ... \$50.00

PART II. 50 remaining names, totaling \$69.50 50.00

No. 119. Student's Series for Chemical Analysis

One hundred hand size specimens, averaging 10 x 7 cm. (4 x 2¾ in.). Like the preceding, but smaller. The average weight is about 450 grams (1 pound avd.), generally affording sufficient of each kind for 200 to 250 analyses. Individual specimens sold at listed prices. These total \$64.60. The "collection price" for all the specimens is \$50.00, delivered to any address. This includes pasteboard trays with one No. 3 Oak Chest. Without chest, 10 per cent. less. If preferred, an equal weight of fragments in boxes, instead of trays, is sold in chest at \$50.00. According to the Chemical List.

PURCHASE IN PARTS. Free delivery with trays and No. 2 Chest, shown in Plate II. Without chest, 10 per cent. less.

PART I. 50 starred names *, totaling \$29.85\$25.00

PART II. 50 remaining names, totaling \$34.75 25.00

Laboratory List

Minerals Sold by Weight

TON LOTS of many rare minerals supplied to experimenters and manufacturers. Prices on request if quantity desired is stated. Correspondence solicited with producers and consumers of rare ores, also colored semi-precious stones, such as Azurite, Turquoise Matrix, etc., etc.

QUALITY. Pieces usually consist of irregular lumps or fragments of about 3 to 9 cm ($1\frac{1}{4}$ to $3\frac{1}{2}$ in.) length, more or less. Specimens trimmed to uniform sizes cost more. The material furnished is about as pure as found in Nature. Where more than 5 per cent. of gangue rock or matrix is attached, the per cent. of pure mineral is noted.

FREE TRANSPORTATION to any address, with privilege of returning any unsatisfactory item at our expense.

EXTRA STRONG CARTONS (double-thick cylindrical cardboard boxes) hold each mineral conveniently and permanently.

A **MINIMUM PRICE** of \$0.20 is charged for even the smallest quantity of any mineral sold by weight.

10 TO 50 KG. samples of one mineral cost proportionately less than listed. Thus 10 kg. or over, 10 per cent. less. 50 kg., 20 per cent. less.

LESS THAN THE LISTED QUANTITY is charged at a rate 25 per cent. higher proportionately than the list price. Thus Manganotantalite listed at \$3.00 per kilo, costs \$0.37 for one-tenth kilo; Glaucodot at \$4.00 per kilo costs \$1.25 for one-quarter kilo; Argyrodite at \$2.50 D. costs \$0.31 G.; Beryl at \$0.40 K. costs \$0.20 for $\frac{1}{4}$ K. (minimum charge), etc.

A **METAL CLASSIFICATION** of the economic minerals in this list, showing the minerals carrying each metal, will be found in Part V.

FOREIGN MONEY is, for convenience, accepted as follows:
\$1.00 = 4/- = M. 4. = Fcs. 5 = L. 5.
